(SRS)

Moghul Travel & Tours

Website Management System

Version	1.0.0
Date	30 August 2026
Document ID	SRS-MTT-2026
Status	Draft

Prepared by:

Mirza Naufal Beg bin Mirza Mohammad Raziq Beg

1. INTRODUCTION

1.1 Purpose

This document is the Software Requirements Specification (SRS) for the Moghul Travel & Tours Website Management System, hereinafter referred to as the MTT System. This SRS outlines the functional and non-functional requirements, system constraints, and use case specifications that will guide the design and development of the system.

The MTT System is a full-stack web application that replaces the existing static website (moghulTT.com) with a dynamic, database-driven platform. It enables Moghul Travel & Tours to publish and manage travel packages, receive and manage customer inquiries, maintain a photo gallery, publish testimonials and promotions, and manage internal staff access — all through a secure admin dashboard.

This document is intended for the developer (Mirza Naufal Beg), the business owner (the client), and any future developer or agency who inherits and maintains the system.

1.2 System Identification

System Title	Moghul Travel & Tours Website Management System
Year of Development	2026
System ID	MTT-2026-V01
Documentation ID	SRS-MTT-2026
Use Case ID Format	UC-MTT-001 (UC = Use Case, MTT = Moghul Travel & Tours, 001 = sequence number)
Requirement ID Format	REQ-MTT-001-001 (REQ = Requirement, MTT = system, 001 = UC number, 001 = req number)
Client	Moghul Travel & Tours (MOTAC licensed travel agency, Malaysia)
Developer	Mirza Naufal Beg bin Mirza Mohammad Raziq Beg, CB23063

Table 1.1 – System Identification

1.3 System Overview

The MTT System is a seven-module web platform organized as follows:

Module	Name	Description
1	User Access & Account Management	Login, logout, Master Admin creates/deletes staff admin accounts
2	Manage Packages	Admin creates, edits, and deletes travel packages; visitors browse and view
3	Manage Inquiries	Visitors submit inquiry forms; Admin manages and responds to leads
4	Manage Gallery	Admin uploads and organises trip photos; visitors browse the gallery
5	Manage Testimonials	Admin manages customer reviews and ratings; visitors read them
6	Manage Content Pages	Admin edits About Us, contact details, MOTAC info, and social links

7	Manage Announcements	Admin posts promotions and time-sensitive notices visible to visitors
---	----------------------	---

2. OVERALL DESCRIPTION

2.1 User Story

2.1.1 Background and Motivation

Moghul Travel & Tours is a Malaysia-based travel agency offering Umrah, Ziarah, and group tour packages. The agency's existing website (moghultt.com) is a static PHP site that cannot be updated by the business owner or staff. All package information, promotions, and contact details are hardcoded and require developer access to change.

This creates significant business friction: packages go out of date, promotions cannot be posted in time, customer inquiries arrive only by phone or walk-in, and the site does not reflect the agency's active social media presence. Competitor agencies such as Jomventures, ARBA Travel, and IBC Tours operate modern, database-driven websites with browsable packages, customer galleries, and online inquiry forms.

The MTT System is introduced to replace the static site with a fully managed, dynamic platform that the agency's own staff can operate without developer involvement — enabling them to stay competitive, capture leads digitally, and present a professional, trustworthy presence online.

2.1.2 System Actors and Roles

Actor	Role & Capabilities
Visitor (Public)	Any member of the public who accesses the website. Visitors can browse packages, view the gallery, read testimonials and announcements, view contact information, and submit inquiry forms. No login required.
Admin (Staff)	An authenticated staff member of Moghul Travel & Tours. Admins can manage packages, inquiries, gallery images, testimonials, content pages, and announcements via a secure dashboard. Admin accounts are created by the Master Admin.
Master Admin (Business Owner)	The highest-privilege account held by the business owner (the father). In addition to all Admin capabilities, the Master Admin can create new Admin accounts using a staff Gmail or company email address, and can deactivate or delete Admin accounts for resigned or terminated staff.

Table 2.1 – System Actors and Roles

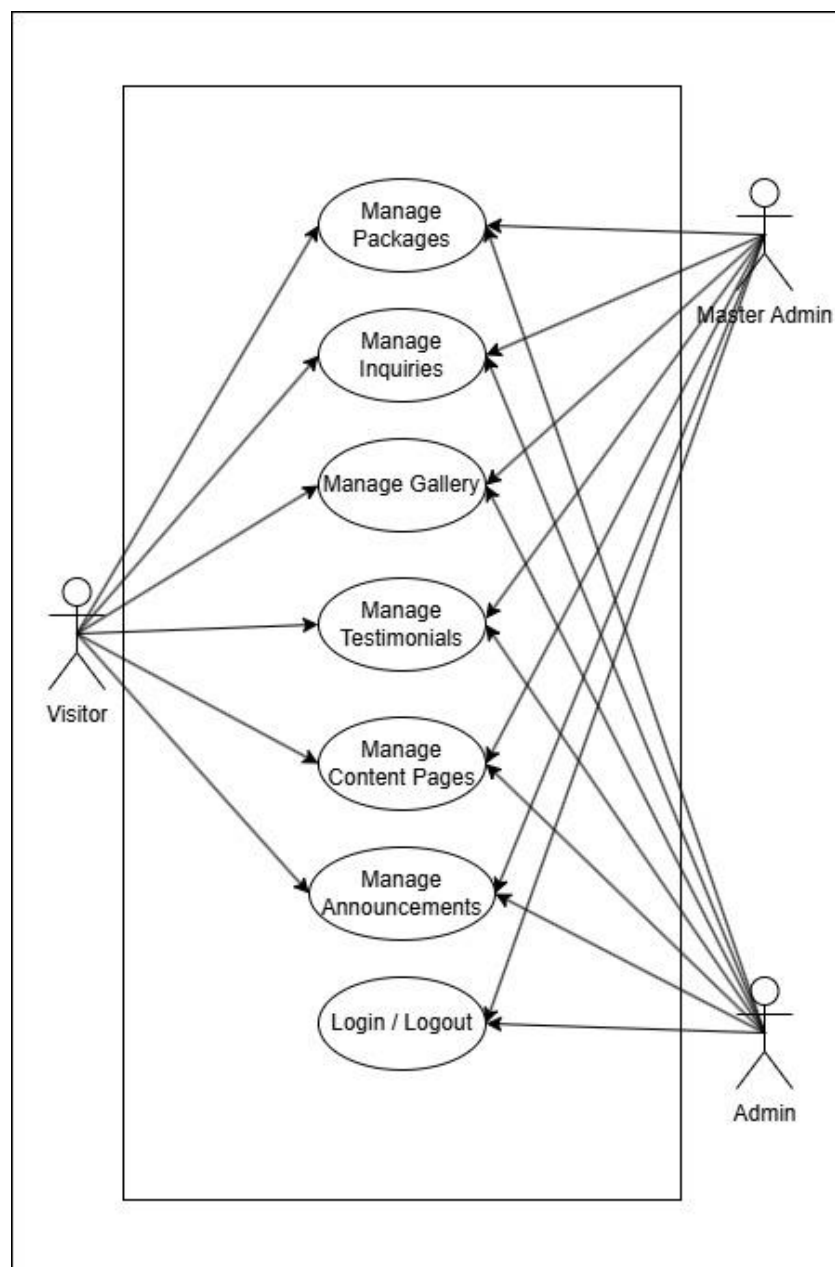

2.1.3 System Structure (Modules)

Module	Description
Module 1: User Access & Account Management	Handles authentication (login/logout) for Admin and Master Admin. Master Admin can create, deactivate, and delete Admin accounts using Gmail or company email addresses.
Module 2: Manage Packages	Admin can create, edit, publish, unpublish, and delete travel packages (Umrah, Ziarah, group tours, domestic). Each package includes title, category, description, itinerary, pricing, departure dates, availability, and images. Visitors can browse all packages and view package detail pages.
Module 3: Manage Inquiries	Public inquiry form allows visitors to submit their name, phone number, email, package interest, and message. Admin views all inquiries in a dashboard, updates inquiry status (New, In Progress, Resolved), and can delete resolved entries. Email notification is sent to Admin on each new inquiry submission.
Module 4: Manage Gallery	Admin uploads trip photos, assigns them to a destination or package tag, and can delete images. Visitors browse the gallery filtered by destination or tag.

Module 5: Manage Testimonials	Admin adds, edits, and deletes customer testimonials including customer name, travel destination, review text, star rating, and date. Visitors view testimonials on the homepage and a dedicated testimonials page.
Module 6: Manage Content Pages	Admin edits the About Us page content, company story, MOTAC license number, office address, phone number, email, office hours, and social media links. Changes are reflected immediately on the public-facing site.
Module 7: Manage Announcements	Admin creates time-sensitive announcements (early-bird promos, sold-out notices, seasonal campaigns) with a title, description, and optional expiry date. Active announcements are displayed to visitors as banners or a notice feed on the homepage.

3. SOFTWARE PRODUCT FEATURES

3.1 USER ACCESS & ACCOUNT MANAGEMENT

3.1.1 Use Case Description

Use Case ID / Name	UC-MTT-001 User Access & Account Management
Brief Description	This use case covers authentication and account management for the MTT System. Admin and Master Admin users can log in and log out securely. The Master Admin can create new Admin accounts using a staff Gmail or company email address, and can deactivate or delete Admin accounts for staff who have resigned or been terminated. Visitors do not require accounts.
Actors	Master Admin (Business Owner) Admin (Staff)
Pre-conditions	The system must be running and accessible. Master Admin account exists and is pre-seeded in the system. For account creation: the new staff member must have a valid Gmail or company email address.
Basic Flow	- The use case begins when an Admin/Master Admin navigates to the login page. - The user enters their email address and password and clicks <<SIGN IN>>. - The system validates credentials against the database. [E1: Invalid Credentials] - On success, the system creates a session and redirects the user to the Admin Dashboard. [REQ-MTT-001-001] - The user performs their required administrative tasks. - The user clicks <<LOGOUT>>. - The system invalidates the session and redirects to the login page. [REQ-MTT-001-002] - The use case ends. (Master Admin – Create Admin Account): - Master Admin navigates to <<USER MANAGEMENT>> from the dashboard. - Master Admin clicks <<ADD NEW ADMIN>>. [REQ-MTT-001-003] - Master Admin enters the new staff member's name and email address. - The system sends an invitation email containing a one-time setup link. [REQ-MTT-001-004] - The new Admin follows the link, sets their password, and gains access. [A1: Invitation Expired] - The use case ends.
Alternative Flow(s)	A1 – Invitation Link Expired: At step 13, if the invitation link has expired (>24 hours), the system displays an expiry notice. Master Admin must resend the invitation from the User Management panel. The use case returns to step 10. A2 – Deactivate / Delete Admin Account: Master Admin navigates to User Management and selects an existing Admin account. Master Admin clicks <<DEACTIVATE>> (preserves data) or <<DELETE>> (removes account). [REQ-MTT-001-005] System displays a confirmation dialog. Master Admin confirms. System deactivates or removes the account and logs an audit entry. The use case ends.
Exception Flow(s)	E1 – Invalid Credentials: At step 3, if the email/password combination is incorrect, the system displays "Invalid email or password. Please try again." After 5 consecutive failed attempts, the system temporarily locks the account for 15 minutes and displays a lockout message. [REQ-MTT-001-006] The use case returns to step 2.
Post-conditions	Admin is authenticated and session is active, or account has been created/deactivated as requested. All account changes are recorded in the audit log.

Rules	Only the Master Admin can create, deactivate, or delete Admin accounts. Passwords must meet minimum security requirements (min. 8 characters, at least one number and one special character). The Master Admin account cannot be deleted through the UI. Account actions must be confirmed before execution.
Constraints	The system relies on an external email service (Resend/SendGrid) for invitation emails. Invitation links are valid for 24 hours only. Admins can only access the admin dashboard — not each other's accounts.

Table 3.1.2 – GUI Description for User Access & Account Management

3.2 MANAGE PACKAGES

3.2.1 Use Case Description

Use Case ID / Name	UC-MTT-002 Manage Packages
Brief Description	This use case allows Admin users to create, edit, publish, unpublish, and delete travel packages. Each package contains all information a visitor needs to evaluate a trip: category, title, description, itinerary highlights, pricing, departure dates, availability, and images. Visitors can browse all published packages and view individual package detail pages.
Actors	Admin (Staff) Visitor (Public)
Pre-conditions	Admin: User is authenticated and logged into the Admin Dashboard. Visitor: The website is publicly accessible.
Basic Flow	(Admin – Create Package): - Admin navigates to <<MANAGE PACKAGES>> from the dashboard. - Admin clicks <<ADD NEW PACKAGE>>. - Admin fills in: Package Title, Category (Umrah / Ziarah / Group Tour / Domestic), Description, Itinerary (day-by-day highlights), Price (per pax), Departure Dates, Availability (open/full/coming soon), and uploads at least one image. [REQ-MTT-002-001] - Admin clicks <<SAVE AS DRAFT>> or <<PUBLISH>>. - System validates all required fields. [E1: Validation Error] - System saves the package to the database. [REQ-MTT-002-002] - If published, the package immediately appears on the public site. [REQ-MTT-002-003] - The use case ends. (Visitor – Browse Packages): - Visitor navigates to the Packages section of the public website. - System displays all published packages, filterable by category. [REQ-MTT-002-004] - Visitor clicks on a package to view the full detail page. - System displays full package details including itinerary, pricing, dates, and images. [REQ-MTT-002-005] - Visitor clicks <<INQUIRE NOW>> to be redirected to the inquiry form. [A1: Visitor Inquires] - The use case ends.
Alternative Flow(s)	A1 – Visitor Submits Inquiry: At step 13, clicking <<INQUIRE NOW>> pre-fills the inquiry form with the selected package name. Use case continues in UC-MTT-003 (Manage Inquiries). A2 – Admin Edits or Unpublishes Package: Admin selects an existing package from the list and clicks <<EDIT>>. Admin modifies any field and clicks <<SAVE>>. [REQ-MTT-002-006] Admin may toggle the package status between Published and Draft/Unpublished. System updates the record. The use case ends. A3 – Admin Deletes Package: Admin selects a package and clicks <<DELETE>>. System displays a confirmation dialog. Admin confirms. [REQ-MTT-002-007] System soft-deletes the package (hidden from public, retained in database for audit). The use case ends.
Exception Flow(s)	E1 – Validation Error: Required fields are empty or image upload fails. System highlights the missing or invalid fields with an error message. Admin corrects the fields and resubmits. The use case returns to step 4.
Post-conditions	Package is saved to the database and, if published, is visible on the public site. Visitor has viewed the package details or been redirected to the inquiry form.

Rules	A package must have at least one image before it can be published. Only published packages are visible to the public. Deleted packages are soft-deleted and not permanently removed until explicitly purged by Master Admin. Package categories are: Umrah, Ziarah, Group Tour, Domestic.
Constraints	Image uploads are stored on Supabase Storage; file size limit is 5MB per image. Admins can upload up to 10 images per package. Package data is stored in PostgreSQL via Supabase.

Table 3.2.2 – GUI Description for Manage Packages

3.3 MANAGE INQUIRIES

3.3.1 Use Case Description

Use Case ID / Name	UC-MTT-003 Manage Inquiries
Brief Description	This use case allows public visitors to submit travel inquiry forms to the agency. Each inquiry captures visitor contact information, the package they are interested in, and their message. Admin users can view, manage, update status, and delete inquiries from the dashboard. An email notification is automatically sent to the Admin whenever a new inquiry is submitted.
Actors	Visitor (Public) Admin (Staff)
Pre-conditions	Visitor: The public website is accessible. Admin: User is authenticated and logged into the Admin Dashboard. Email service (Resend/SendGrid) is operational for admin notifications.
Basic Flow	(Visitor – Submit Inquiry): 1. Visitor navigates to the Inquiry / Contact page or clicks <<INQUIRE NOW>> on a package. [REQ-MTT-003-001] 2. System displays the inquiry form. 3. Visitor fills in: Full Name, Phone Number, Email Address, Package of Interest (dropdown), and Message. [REQ-MTT-003-002] 4. Visitor solves the CAPTCHA to prevent spam. [REQ-MTT-003-003] 5. Visitor clicks <<SUBMIT>>. 6. System validates all required fields. [E1: Validation Error] 7. System saves the inquiry to the database with status "New". [REQ-MTT-003-004] 8. System sends a notification email to the Admin with the inquiry details. [REQ-MTT-003-005] [E2: Email Delivery Failure] 9. System displays a success message to the visitor: "Your inquiry has been submitted. We will contact you shortly." [REQ-MTT-003-006] 10. The use case ends. (Admin – Manage Inquiries): 11. Admin navigates to <<MANAGE INQUIRIES>> from the dashboard. 12. System displays all inquiries sorted by date (newest first), with status badges. [REQ-MTT-003-007] 13. Admin clicks on an inquiry to view full details. 14. Admin updates inquiry status to "In Progress" or "Resolved". [REQ-MTT-003-008] 15. System saves the updated status and timestamp. The use case ends.
Alternative Flow(s)	A1 – Inquiry Pre-filled from Package Page: If the visitor clicked <<INQUIRE NOW>> on a specific package, the Package of Interest field is pre-filled with that package name. Visitor may change the selection if needed. The use case continues from step 3. A2 – Admin Deletes Inquiry: Admin selects a resolved inquiry and clicks <<DELETE>>. System displays a confirmation dialog. Admin confirms. [REQ-MTT-003-009] System removes the inquiry record from the database. The use case ends.
Exception Flow(s)	E1 – Validation Error: Required fields are empty or email address format is invalid. System highlights the problematic fields with error messages. Visitor corrects the fields and resubmits. The use case returns to step 6. E2 – Email Delivery Failure: At step 8, if the email service is unavailable, the inquiry is still saved to the database. System logs the email failure internally. Admin can still see the inquiry in the dashboard. The use case continues from step 9.
Post-conditions	Inquiry is saved to the database and visible in the Admin dashboard. Admin has received an email notification (or inquiry is visible in dashboard if email failed). Visitor has received a success confirmation.

Rules	All fields except Message are required. CAPTCHA must be solved before submission to prevent spam. Inquiry status must progress logically: New → In Progress → Resolved. Only Admin and Master Admin can view or manage inquiries.
Constraints	The system depends on an external email provider (Resend/SendGrid) for notifications. CAPTCHA relies on a third-party CAPTCHA service (e.g., hCaptcha or Google reCAPTCHA v3). Inquiry data is retained in the database until explicitly deleted by Admin.
Author	Mirza Naufal Beg bin Mirza Mohammad Raziq Beg

3.4 MANAGE GALLERY

3.4.1 Use Case Description

Use Case ID / Name	UC-MTT-004 Manage Gallery
Brief Description	This use case allows Admin users to upload, tag, and delete trip photos in the site gallery. The gallery serves as a key social proof element, showing visitors real photographs from past trips. Visitors can browse all gallery images and optionally filter by destination or package tag.
Actors	Admin (Staff) Visitor (Public)
Pre-conditions	Admin: User is authenticated and logged into the Admin Dashboard. Visitor: The public website is accessible.
Basic Flow	(Admin – Upload Photos): - Admin navigates to <<MANAGE GALLERY>> from the dashboard. - Admin clicks <<UPLOAD PHOTOS>>. - Admin selects one or more image files from their device. [REQ-MTT-004-001] - Admin assigns a destination or package tag to the uploaded images (e.g., "Japan 2025", "Umrah"). [REQ-MTT-004-002] - Admin clicks <<UPLOAD>>. - System validates file format (JPG, PNG, WEBP) and size (max 5MB each). [E1: Invalid File] - System uploads images to storage and saves metadata to the database. [REQ-MTT-004-003] - Images immediately appear in the public gallery. [REQ-MTT-004-004] - The use case ends. (Visitor – Browse Gallery): - Visitor navigates to the Gallery page on the public site. - System displays all gallery images in a responsive grid layout. [REQ-MTT-004-005] - Visitor optionally selects a destination filter to view images for a specific trip. [A1: Filter by Tag] - Visitor clicks an image to view it in a full-screen lightbox. - The use case ends.
Alternative Flow(s)	A1 – Filter by Destination Tag: Visitor selects a destination from the filter options. System displays only images tagged with that destination. [REQ-MTT-004-006] Visitor can clear the filter to return to the full gallery. The use case continues from step 13. A2 – Admin Deletes a Photo: Admin selects an image in the admin gallery panel and clicks <<DELETE>>. System displays a confirmation dialog. Admin confirms. [REQ-MTT-004-007] System removes the image from storage and database. The use case ends.
Exception Flow(s)	E1 – Invalid File: File is not JPG, PNG, or WEBP, or exceeds 5MB. System displays an error specifying the invalid file(s). Admin corrects the selection and resubmits. The use case returns to step 5.
Post-conditions	Uploaded images are stored and visible in the public gallery. Deleted images are removed from both storage and the database.
Rules	Accepted formats: JPG, PNG, WEBP only. Maximum file size per image: 5MB. Each image must have at least one destination/package tag assigned. Only Admin and Master Admin can upload or delete gallery images.
Constraints	Images are stored on Supabase Storage. Image display relies on responsive CSS grid; performance depends on image optimisation (Next.js Image component).

3.5 MANAGE TESTIMONIALS

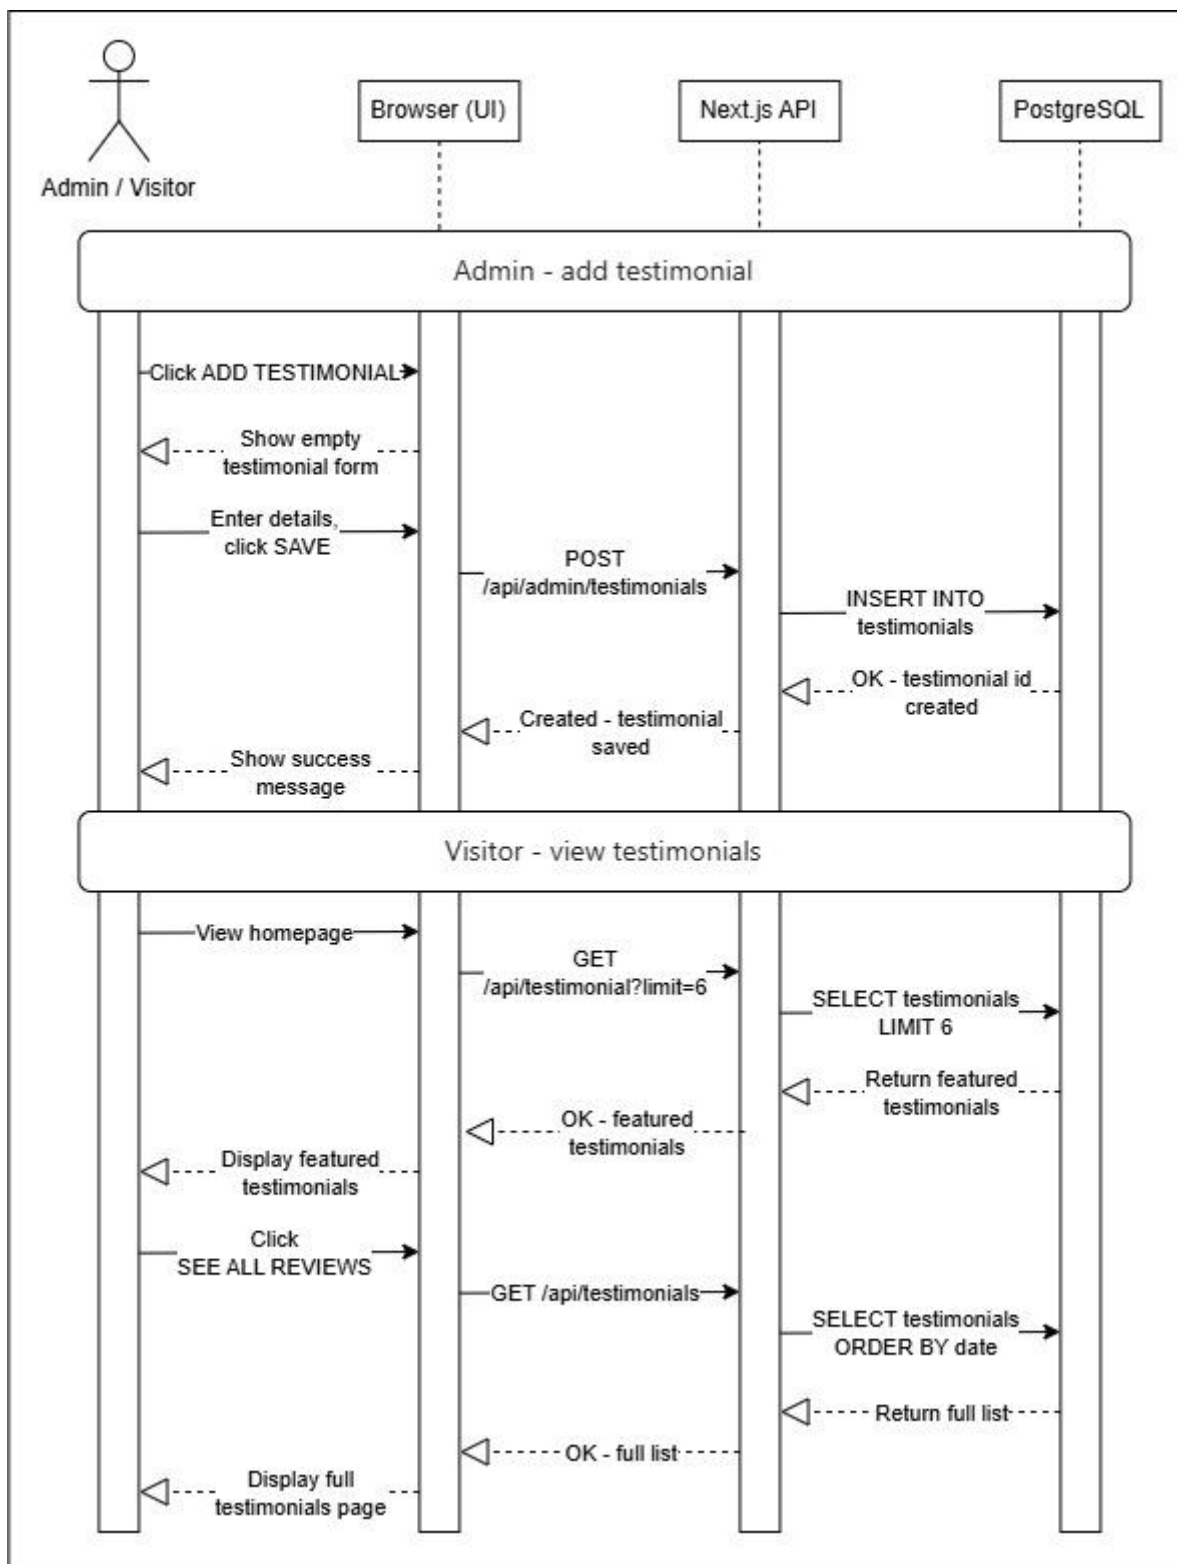

3.5.1 Use Case Description

Use Case ID / Name	UC-MTT-005 Manage Testimonials
Brief Description	This use case allows Admin users to add, edit, and delete customer testimonials. Each testimonial captures the customer's name, the trip they went on, their written review, and an optional star rating. Testimonials are displayed on the homepage and a dedicated testimonials page to build trust with prospective customers.
Actors	Admin (Staff) Visitor (Public)
Pre-conditions	Admin: User is authenticated and logged into the Admin Dashboard. Visitor: The public website is accessible.
Basic Flow	(Admin – Add Testimonial): - Admin navigates to <<MANAGE TESTIMONIALS>> from the dashboard. - Admin clicks <<ADD TESTIMONIAL>>. - Admin enters: Customer Name, Trip / Package Name, Review Text, Star Rating (1–5), and Date of Trip. [REQ-MTT-005-001] - Admin clicks <<SAVE>>. - System validates required fields. [E1: Validation Error] - System saves the testimonial and it becomes visible on the public site immediately. [REQ-MTT-005-002] - The use case ends. (Visitor – View Testimonials): - Visitor views the homepage where a selection of testimonials is displayed. - Visitor clicks <<SEE ALL REVIEWS>> to navigate to the full testimonials page. - System displays all testimonials sorted by date (newest first). [REQ-MTT-005-003] - The use case ends.
Alternative Flow(s)	A1 – Admin Edits Testimonial: Admin selects an existing testimonial and clicks <<EDIT>>. Admin modifies any field and clicks <<SAVE>>. [REQ-MTT-005-004] System updates the record. The use case ends. A2 – Admin Deletes Testimonial: Admin selects a testimonial and clicks <<DELETE>>. System displays a confirmation dialog. Admin confirms. [REQ-MTT-005-005] System removes the testimonial from the database and public site. The use case ends.
Exception Flow(s)	E1 – Validation Error: Required fields (Customer Name, Trip Name, Review Text) are empty. System highlights missing fields. Admin corrects and resubmits. The use case returns to step 4.
Post-conditions	Testimonial is saved and displayed on the public site. Deleted testimonials are permanently removed.
Rules	Customer Name, Trip Name, and Review Text are required fields. Star rating must be between 1 and 5 if provided. Only Admin and Master Admin can manage testimonials. Testimonials are entered manually by Admin (no public submission in v1).
Constraints	Homepage displays a maximum of 6 featured testimonials; full list is on the testimonials page.

3.6 MANAGE CONTENT PAGES

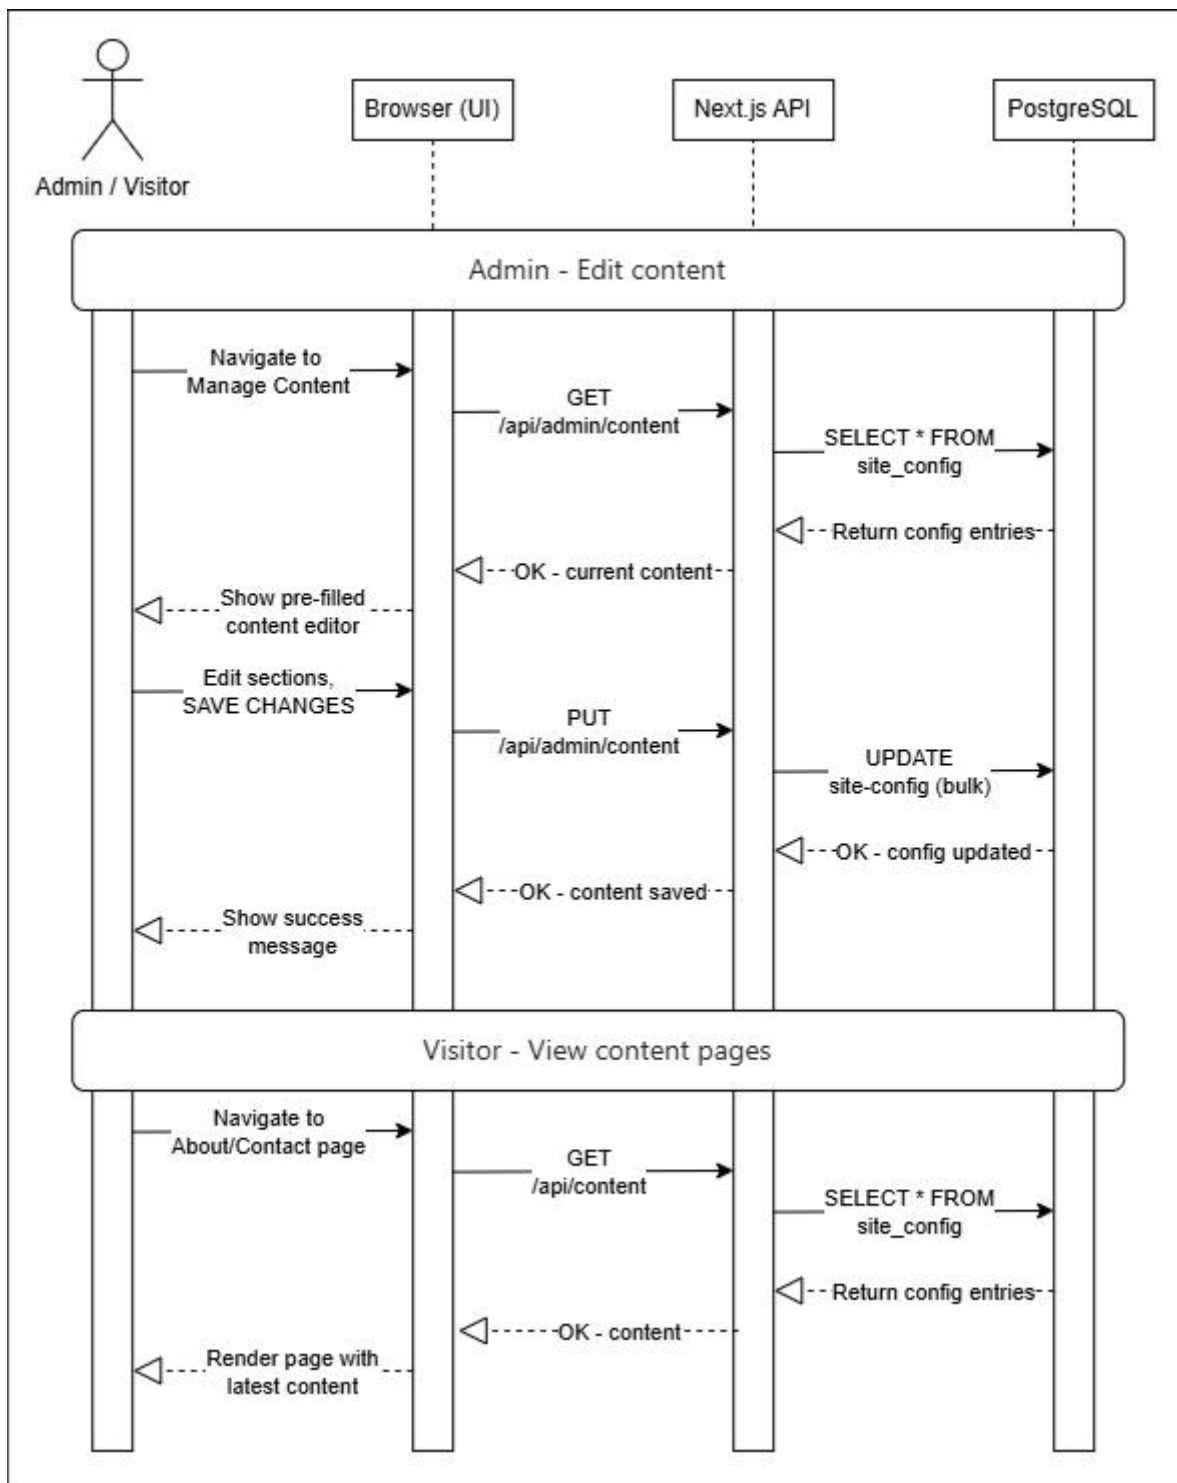

3.6.1 Use Case Description

Use Case ID / Name	UC-MTT-006 Manage Content Pages
Brief Description	This use case allows Admin users to edit the static content of the public website — specifically the About Us page, agency story, MOTAC license number, office contact details, office hours, and social media links. Changes are saved to the database and reflected on the public site immediately without requiring a code deployment.
Actors	Admin (Staff) Visitor (Public)
Pre-conditions	Admin: User is authenticated and logged into the Admin Dashboard. Visitor: The public website is accessible.
Basic Flow	(Admin – Edit Content): - Admin navigates to <<MANAGE CONTENT>> from the dashboard. - System displays an editable form pre-populated with the current content. [REQ-MTT-006-001] - Admin may edit any of the following sections: - About Us — agency story and description [REQ-MTT-006-002] - Contact Details — address, phone number, email [REQ-MTT-006-003] - Office Hours — operating days and times [REQ-MTT-006-004] - MOTAC License — license number and member associations [REQ-MTT-006-005] - Social Media Links — Facebook, Instagram, TikTok, WhatsApp [REQ-MTT-006-006] - Admin clicks <<SAVE CHANGES>>. - System validates the form (e.g., URL format for social links, phone number format). [E1: Validation Error] - System saves all changes to the database. - The public-facing pages immediately reflect the updated content. [REQ-MTT-006-007] - The use case ends. (Visitor – View Content Pages): - Visitor navigates to the About Us or Contact page. - System renders the page using the latest saved content from the database. - The use case ends.
Alternative Flow(s)	A1 – Admin Discards Changes: Admin clicks <<CANCEL>> or navigates away before saving. System prompts: "You have unsaved changes. Are you sure you want to leave?" If confirmed, changes are discarded and the previous content remains live.
Exception Flow(s)	E1 – Validation Error: Social media URL format is invalid, or phone number contains non-numeric characters. System highlights the invalid fields with guidance messages. Admin corrects the input and resubmits. The use case returns to step 4.
Post-conditions	Content changes are saved to the database and reflected on the public site. No changes are lost if Admin saves successfully.
Rules	All content sections are editable independently. Social media links must be valid URLs. Phone number must be a valid Malaysian format. Only Admin and Master Admin can edit site content.
Constraints	Content is stored in a dedicated site_config or content table in the database. No version history in v1 — last save overwrites previous content.
Author	Mirza Naufal Beg bin Mirza Mohammad Raziq Beg

3.7 MANAGE ANNOUNCEMENTS & PROMOTIONS

3.7.1 Use Case Description

Use Case ID / Name	UC-MTT-007 Manage Announcements & Promotions
Brief Description	This use case allows Admin users to create, edit, and delete time-sensitive announcements such as early-bird promotions, sold-out notices, or seasonal campaigns. Each announcement has a title, body text, and an optional expiry date. Active (non-expired) announcements are displayed to visitors as a prominent banner or notice feed on the homepage.
Actors	Admin (Staff) Visitor (Public)
Pre-conditions	Admin: User is authenticated and logged into the Admin Dashboard. Visitor: The public website is accessible.
Basic Flow	(Admin – Create Announcement): - Admin navigates to <<MANAGE ANNOUNCEMENTS>> from the dashboard. - Admin clicks <<ADD ANNOUNCEMENT>>. - Admin enters: Title, Body Text, and an optional Expiry Date. [REQ-MTT-007-001] - Admin clicks <<PUBLISH>>. - System validates required fields (Title and Body are required). [E1: Validation Error] - System saves the announcement and sets its status to "Active". [REQ-MTT-007-002] - The announcement is immediately displayed on the public homepage. [REQ-MTT-007-003] - The use case ends. (Visitor – View Announcements): - Visitor loads the homepage. - System checks for any active, non-expired announcements. [REQ-MTT-007-004] - If announcements exist, they are displayed as a banner or notice section above the fold. - If no active announcements exist, the section is hidden. [A1: No Active Announcements] - The use case ends.
Alternative Flow(s)	A1 – No Active Announcements: System finds no active or non-expired announcements. The announcement section on the homepage is hidden automatically. The use case ends. A2 – Admin Edits Announcement: Admin selects an existing announcement and clicks <<EDIT>>. Admin modifies the title, body, or expiry date and clicks <<SAVE>>. [REQ-MTT-007-005] System updates the record. The use case ends. A3 – Admin Manually Expires / Deletes Announcement: Admin selects an announcement and clicks <<EXPIRE NOW>> or <<DELETE>>. [REQ-MTT-007-006] System marks it as expired or removes it from the database. It is no longer displayed on the public site. The use case ends.
Exception Flow(s)	E1 – Validation Error: Title or Body Text is empty. System highlights the missing fields. Admin corrects and resubmits. The use case returns to step 4.
Post-conditions	Announcement is saved to the database and displayed on the public site. Expired or deleted announcements are no longer visible to visitors.
Rules	Title and Body Text are required fields. If no expiry date is set, the announcement remains active until manually expired or deleted. Expired announcements are automatically hidden from the public site. Only Admin and Master Admin can manage announcements.

Constraints	Expiry checking is handled server-side on each page request (no cron job required for v1). Multiple active announcements can coexist; they are displayed in chronological order (newest first).
